RoHS2/RoHS3

Statement of compliance

The RoHS-directive restricts the use of certain hazardous materials in the manufacture of various types of electronic and electrical equipment. These regulations have been observed and implanted into design and manufacturing processes. This statement is valid for all manufacturing orders dated later than Jan 2011.

Regarding this specific order we confirm that the material used in the construction of our components, assemblies and equipment including raw stock, surface treatment and gaskets are completely in compliance with the RoHS2 / RoHS3 directives. The deliveries do not contain more than the permitted level of any of the restricted substances.

The directive requires that certain substances are not allowed to exceed maximum concentration values by weight in homogeneous materials as specified in Annex II. Some of the alloys we use may contain lead and/or cadmium, but in amounts not exceeding the stated thresholds.

- Lead (Pb) in zinc alloys: < 0.003 % and cadmium (Cd) < 0.003 %
- Lead (Pb) in carbon steel Grade 1.0718 < 0.35%
- Lead (Pb) in copper alloys: < 3.5 %.
- Mercury (Hg), Cr VI, PBB, PBDE, DEHP, BBP, DBP and DIBP are not included in any of our components.

All other substances acc. to annex II are not included in our deliveries.

Sincerely,

Christian Fritz
