

For many years, PMH Vehicle Equipment have worked alongside our customers, offering hardware solutions for many applications. From grab handles to compression handles and lamps to latches, we offer a wide range of products which meets our customer's requirements. Our centrally based warehouse, some twenty miles North of Birmingham, carries a wide range of stock, giving us the facility to offer a next day service if required. The business has been based on service; and has grown significantly over the years to where it stands today.

Sockets

We offer two variations of the 12V Twin USB Port. Our standard range features the twin ports, a dust cap to match the AUX port and a single blue LED to signal the port is on. This option comes complete with a plastic nut to screw into place.

The second variety also has twin USB ports, with a surrounding plate that glows blue to signal the port is on. This option is affixed by three small screws which are supplied with the product, then the matt black cover plate simply and securely attaches over the top.

Additionally, stock the AUX socket to match our standard Twin USB Port, with identical measurements and fitting.

These items are available from stock.

General Additions

External Friction Hinge 65X60mm 180°

Screw mounted friction hinge with universal left and right mounting. Opening angle 180°. This hinge has been designed for applications where the force to open or close a door needs to be controlled and adjusted, facilitating the possibility to keep the door open, partially open or closed.

To adjust the friction force, simply turn the screw on the hinge body clockwise to increase the friction and counter-clockwise to reduce it. By setting the screw to torque 0-4 Nm the resistance of opening and closing the friction of the hinge is adjusted between 0-5,5 Nm. Do not exceed the torque or rotation angle limits as not to affect the mechanical performance of the hinge.

External Friction Hinge 50X50mm 180°

Friction hinge with pre-defined torque's between 0,5 – 1,5 Nm. High quality friction inserts with increments of 0,25 Nm are embedded in the hinge for precise torque control. Load of the door is distributed over three hinge leaves regardless of how its mounted. This, in combination with the high-end friction mechanism, provides smooth operating over long time.
